JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

History of plague cases previously reported.

The death reported in my cablegram of July 21 was of a Japanese laborer living at Aiea Plantation 12 miles from Honolulu. The necropsy was performed during the night by Doctor McDonald. Passed Assistant Surgeon Currie was not notified, so no specimen* or cultures were obtained. Doctor McDonald considered the case one of typical plague at necropsy. This case will be designated No. 1 of the recrudescence. The other case referred to in my cablegram of same date—case No. 2—died July 24, name S. N., age 8, Japanese, son of preceding case; sickened in same house. Necropsied in presence of Passed Assistant Surgeon Currie, who took cultures and will report later, when examination has been completed. At present he makes a provisional diagnosis of bubonic plague. This case is designated as No. 2.

Cases Nos. 3 and 4, reported July 29:

Case No. 3. A. A., age 6, female, sickened at her home on Looisa lane and Cooke street, Honolulu proper, on July 19; walked, July 25, to dispensary for treatment, where she was seen, and cultures were taken from left femoral bubo by Passed Assistant Surgeon Currie. He regards the case as sufficiently suspicious to justify investigation.

Case No. 4. G. K., age 22, male, Japanese, sickened July 12, 2 days after visiting Aiea; was first seen by Passed Assistant Surgeon Currie on July 26, who took cultures and will report later. For present a provisional diagnosis of bubonic plague has been made. Both cases are isolated at Kilihi Hospital and the indications are that they will recover.

The last case at Honolulu was reported July 22.

HONDURAS.

Report from Ceiba, fruit port.

Acting Assistant Surgeon Reynolds reports as follows: Week ended August 4, 1907. Present officially estimated population, 6,500. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
July 30	Rosina	New Orleans	30	14	0	0
Aug. 4	Habil	do	15	0	0	0

Reports from Tela—Inspection of vessels.

Acting Assistant Surgeon Roe reports as follows: Week ended August 3, 1907. Present officially estimated population, about 1,250; general sanitary condition of this port and the surrounding country during the week, good.
